PROFESSIONAL SUMMARY

Detail-oriented and analytical Software Quality Assurance & Testing Student currently pursuing a degree in Computer Science at the Arab Open University. Equipped with strong technical foundations in Java, Python, and Object-Oriented Programming, alongside specialized training in software testing concepts, machine learning, and unit testing frameworks. Proven ability to design test cases, execute functional validation, and build robust software applications. Eager to contribute technical expertise and a meticulous approach to QA in a dynamic tech environment.

EDUCATION

Bachelor of Computer Science 2024 – 2028
Arab Open University (AOU), Egypt | GPA: 3.76 / 4.00

TECHNICAL SKILLS

Testing & QA Methodologies: Manual Testing, Functional Testing, UI Testing, Test Case Design, Defect Tracking, Unit Testing, Software Testing Concepts & Techniques.

Programming Languages: Java, Python.

Core Concepts: Object-Oriented Programming (OOP), Data Structures & Algorithms, Exception Handling, API Integration, Cryptography.

Tools & Technologies: Git, GitHub, VS Code, IntelliJ IDEA.

PROJECTS

Phishing Detection & Threat Intelligence System (Java OOP) [\[GitHub Repo\]](#) Jul 2026

- Re-architected a machine learning phishing link detection engine from Python into robust Java, designing clean object composition (LinkInfo and DetectionModel classes).
- Implemented strict encapsulation separating data modeling from business logic execution to simulate threat intelligence dashboards and evaluate URL threat patterns.

Phishing Link Detection System (Python/ML) [\[GitHub Repo\]](#) Jul 2026

- Built a machine learning-powered URL phishing detection system featuring predictive classification models and interactive web dashboards.
- Executed data preprocessing and model evaluation workflows to ensure high prediction accuracy against malicious URLs.

Bank Account System (Java) [\[GitHub Repo\]](#) Aug 2026

- Developed an enterprise-grade Java console application implementing core Object-Oriented Programming (OOP) principles.
- Designed a robust transfer method featuring comprehensive validation rules and exception handling.

Company Management System (Java) [\[GitHub Repo\]](#) Aug 2026

- Implemented a Java console application leveraging OOP principles to manage employees, departments, and project assignments with integrated salary tracking.

Insurance Cost Prediction (Python) [\[GitHub Repo\]](#) Jul 2026

- Developed a predictive regression model to analyze medical insurance costs based on demographic and lifestyle factors.
- Performed exploratory data analysis, feature scaling, and performance evaluation using machine learning libraries.

Unit Testing Suite [\[GitHub Repo\]](#) Jul 2026

- Designed and implemented automated unit testing suites to validate functional correctness and edge-case handling across software modules.

N-Queens Interactive Backtracking Solver (Python) [\[GitHub Repo\]](#) Jun 2026

- Built an interactive algorithmic solver for the N x N board puzzle utilizing recursive depth-first search and real-time validation logic.

Python File Encryption & Decryption Tool [\[GitHub Repo\]](#) Jun 2026

- Engineered a secure file utility using Python's cryptography library with persistent local key generation and comprehensive exception handling.

Real-Time Currency Exchange Rate Fetcher & API Integration [\[GitHub Repo\]](#)

Jun 2026

- Integrated external REST APIs and JSON parsing to fetch live global conversion rates with structured CLI input validation.

Number Guessing Game (Python) [\[GitHub Repo\]](#)

Jun 2026

- Developed an interactive Python logic game featuring input validation, score tracking, and structured replay mechanisms.

CERTIFICATIONS & TRAINING

- **Software Testing Training** – Digital Egypt Pioneers Initiative (DEPI) (6 Months): Intensive hands-on training focusing on software testing lifecycle, test case design, manual verification, and defect tracking methodologies.
- **Machine Learning Summer Training** – National Telecommunication Institute (NTI) (120 Hours): Covered data preprocessing, classification algorithms, feature evaluation, and machine learning model implementation and validation.
- **Generative AI Summer Internship Program** – Commercial International Bank (CIB) (1 Month): Gained deep understanding of generative AI principles, practical applications, and best practices in banking tech environments.
- **Software Testing & Programming using Python Summer Camps** – Sprints x Microsoft (40 Hours): Practiced software testing fundamentals, test assertions, and core programming logic using Python automation utilities.
- **Introduction to Software Testing Concepts & Techniques** – ITI Platform (Mahara-Tech): Mastered fundamental software testing concepts, quality assurance standards, test documentation, and verification techniques.
- **Introduction to Modern AI** – Cisco Networking Academy / Arab Open University (1 Month): Explored core concepts of modern artificial intelligence, machine learning pipelines, and neural network fundamentals.
- **English for IT: Advice and Time** – Cisco Networking Academy / ELCC Academy (1 Month): Enhanced technical communication, professional vocabulary, and IT workplace terminology.
- **Build with AI (Masr Edition)** – Google for Developers & ITI (1 Month): Attended specialized technical sessions on modern AI building tools and deployment workflows.
- **Become Experts in Python** – Udemy (10.5 Hours): Advanced Python programming, data structures, algorithm exercises, and interactive project implementation.
- **She Leads Vol.2 Online Program** – iCareer: Focused on leadership development, professional growth, and strategic career advancement skills.
